**Sample Date:** 06/24/2025

**Research Date:** 06/24/2025

### Disorder Results(5 of 6)

|          |        |                                                                                                                                                   |
|----------|--------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| DM       | n/n    | Clear: Dog is negative for mutation associated with Degenerative Myelopathy.                                                                      |
| DM-B     | n/DM-b | Heterozygous: Dog carries one copy of the mutation associated with Degenerative Myelopathy-b. The mutated copy may be passed on to any offspring. |
| NEwS     | n/n    | Clear: Dog is negative for mutation associated with NEwS.                                                                                         |
| PRA-prcd | n/n    | Negative: Dog is negative for the mutation associated with prcd-PRA.                                                                              |
| vWD1     | n/n    | Clear: Dog is negative for the mutation associated with von Willebrand's Disease Type I.                                                          |

### Pattern Results(1 of 6)

|         |     |                                                                                                                              |
|---------|-----|------------------------------------------------------------------------------------------------------------------------------|
| S-Locus | n/S | Heterozygous: Dog has one copy of S-Locus. Results vary according to breed, with some limited white spotting in some breeds. |
